                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Anote-Tractor: psport1; Site_1: Sal1; Site_2: Not1; RNA was prepared from a pool of 6 anonymous Wilms' tumor RNAs. RNA was prepared by acid-phenol, followed by one round of oligo dr selection. CDNA library preparation was with the BRL/Life Tech. Superscript Plasmid system. An oligo-dr Not1 primer for first strand synthesis generated geggccgccc(t)n at the 3' end of the clones. A 5' Sal1 adaptor was used with sequence 5'-gtcgacccagcgtcgr3 Resulting cDNAs were size selected (average size 2 kb), Not1 digested, and ligated into Not1/Sal1-cut psport1. Library was constructed by Dr. Manfred Gessler.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Jobse 1977 John Parc (Pharmacia) with a modified polylinker; 1st strand cDNA was prepared from pooled bulk breast tumor tissue, and was then primed with a Not I ollgo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pr773 vector. This library is the normalized version of NCI_CGAP_BII.1. Library was constructed by Bento Soares and M. Fating Bonaldo.
